Program

TARGET AUDIENCE: ALL GRADE 4-9 TEACHERS ARE ENCOURAGED TO ATTEND

Dr. David Orr tells us that "Given the vulnerable state of our natural world, we need a different approach to education" - one that develops students who are not only knowledgeable but also environmentally and socially conscious.

What knowledge and competencies do Alberta students need to create a sustainable future? How can we help them develop environmental stewardship and citizenship?

We'll share the Curriculum for a Sustainable Future that you can use to enhance your own teaching, showcase inspiring classroom stories, share resources, and identify grants to help turn your ideas into actions.

This learning opportunity is being offered through curriculum implementation funding from Alberta Education.

Presenters

Marie Tremblay

joined the Alberta Council for Environmental Education in 2018 as senior education advisor, bringing to her role a dual passion for education and the environment. With university degrees in engineering, education, environmental design (Master's) and ecology (PhD), it's fair to say she also has a passion for learning. Marie's professional experience includes over a decade of teaching in a variety of settings from grade 1 to university level, including five years in

Indigenous communities of Canada's far north. Marie has also been an active member of Alberta's environmental community for over two decades as a graduate student and conservation scientist in the government and non-profit sectors. Marie is particularly passionate about developing critical thinking skills and sustainability competencies through environmental and climate education.
